

Seeing what the Driver sees

Driver's POV Filming

For Asset Survey, Signal Sighting & More

- Quick and cost effective filming from service trains or specials
- Calibrated set-up with GPS tracking
- HD resolution – Multiple views
- Provided on DVD or for Online access
- Ideal for use in the G-Player software prior to G-RASTx integration

As part of our filming service Gioconda Ltd offer to provide High Definition Drivers Point Of View from the front and/or rear cab. Whether it is for early project assessment, signal sighting, construction and stageworks records or driver briefing, our filming service is the ideal solution.

If required we can use service trains and do a quick set up for general video recording or provide a calibrated set-up for survey, signal sighting and similar requirements. In both scenarios we use skilled camera operators, sitting in the second man's seat, to control the recording and achieve the best possible result.

Gioconda has a variety of camera set up options that allow us to film in any unit with ease.

Where a calibrated set-up is required we can use our rigs to position a small camera near to the drivers eye line without impeding their view. This is ideal for Signal sighting requirements.

We always arrange the appropriate TOC permissions , cab passes etc. and all our operators are PTS certified.
