

## A Free Video Player with a difference

# G-Player

- View railway POV footage & stills from any source
- Basic height, offset & point to point measurements
- Chainage display \*
- Overlay grid for distance assessment \*
- Screen Capture facility with notes superimposed

\* Available only with footage supplied by Gioconda

The G-Player software is a free of charge application for Windows & Mac users. It enables the playback of either Railway POV footage or photographs (jpeg and png) taken from near to the drivers line of sight for the purposes of measuring & assessing the railway.

It is an ideal tool to distribute to a project team which may have the need to occasionally view and measure simple offsets & heights to assets like signals, signage, bridges, cess width etc. or to confirm access.

If supplied as part of a Gioconda project then chainage/meterage will be displayed along with a grid overlay for assessing distance along the track.

In either case this is an ideal tool for early Grip assessment or for allowing access to the drivers view across the whole team throughout the whole project.

### Specification

- Source Video is resized and displayed at 720p
- Works well with compressed video over networks
- Designed to work on notebooks and PC's with a minimum screen resolution of 1280x800 pixels
- Download the latest version from [gioconda.co.uk](http://gioconda.co.uk) or contact Gioconda direct

### GioCalc

Also available for download is the GioCalc, a small Signalling Design specific calculator.
